

## Press Release

### **Total Eren to provide affordable and clean power to Indonesian PT Perusahaan Listrik Negara with a 70MW wind power plant**

**Paris, 12 December 2017** – In the context of the One Planet Summit, Total Eren announces the signature of a Letter of Intent (“LoI”) with PT Perusahaan Listrik Negara (“PLN”), the Indonesian government-owned electricity provider, for the power purchase from a 70MW wind project to be constructed on the southern end of Borneo island.

Ahead of the One Planet Summit organized in France to promote tangible means to achieve the Paris Agreement targets from 2015, PLN and Total Eren signed a Letter of Intent (“LoI”) for the purchase of electricity to be produced by a large-scale wind power plant, the Tanah Laut project. The 70MW wind power plant will be financed, built and operated by Total Eren.

The Tanah Laut project is the first wind project to be signed under the new Ministry of Energy regulation in Indonesia (Permen ESDM 50/2017). Issued in August 2017 and aiming at electricity generation cost reduction.

The project will be constructed in Tanah Laut, located on Kalimantan, the Indonesian part of Borneo island. The 20-month wind data gathered by Total Eren through its subsidiary based in Jakarta, PACE Energy, confirmed the high-quality of the wind resource at site.

For the advancement of the project, Total Eren and PACE Energy joined forces with General Electric Indonesia (“GE”). GE, the project’s preferred technology supplier, has supported the project design and conducted the grid connection study.

Fabienne Demol, Executive Vice President – Global Head of Business Development of Total Eren, commented: *“The Indonesian government has set challenging objectives for the cost reduction of electricity generated from renewable energy sources. Thanks to the excellent choice of location and wind resource by our team in Indonesia, as well as the acute expertise of General Electric, and the efforts of all stakeholders involved, including the Indonesian authorities and PLN, we managed to kick off this project successfully while making it affordable and reliable. The signature of this letter of interest marks the first important, concrete milestone of the project and we are looking forward to its application.”*

Total Eren is developing several other greenfield wind projects in Indonesia and has regional offices in Melbourne, Singapore, Jakarta and Bangkok, with the Jakarta office representing the regional headquarters.

## About Total Eren

Founded in 2012 by Pâris Mouratoglou and David Corchia, Total Eren has built up a substantial and diversified portfolio of wind, solar and hydroelectric assets representing an installed gross capacity of more than 650 MW in operation or under construction worldwide. Through partnerships with local developers, Total Eren is currently developing numerous energy projects in countries and regions where renewable energy represents an economically viable response to growing energy demand, such as in Asia-Pacific, Africa and Latin America. Its objective is to achieve a global net installed capacity of more than 3 GW by 2022.
